Over voltage and over current protection IC

[Http://www.sh-willsemi.com](http://www.sh-willsemi.com)

Descriptions

The WS3202E is an Over-Voltage-Protection (OVP) and Over-Current-Protection (OCP) device. The device will switch off internal MOSFET to disconnect IN to OUT to protect load when any of input voltage, input current over the threshold. The Over temperature protection (OTP) function monitors chip temperature to protect the device.

The WS3202E is available in SOT-23-6L package. Standard products are Pb-free and Halogen-free.

Typical applications**Pin descriptions**

Pin No.	Symbol	Descriptions
1, 2, 5, 6	GND	Power ground
3	IN	Input pin, connect to AC adaptor or VBUS. A 1uF low ESR ceramic capacitor or larger must be connected as close as to this pin. It is recommended to use 50V capacitor or according to application.
4	OUT	Output pin, Connect to load.
